Testing Centre

Our quality for your assurance and security

WHY choose the services of the Testing Centre

If you are a **manufacturer**, you will obtain data on the quality of your product.

If you are a **buyer** of a product, you will find out everything you need about the quality of the selected product.

If you are a real estate **manager** or a caring **housekeeper**, you will find out what the quality of your selected fuel is, what emissions and how much of them are released to the environment from your boiler house, what the quality of the drinking water you use is and how your wastewater treatment plant operates.

Our **specialists** will carry out all the necessary tests, and you will get answers to your questions in a short time. We perform tests quickly, accurately and at competitive prices.

WE OFFER

Water sampling and testing. We carry out testing of drinking water, water from lakes and water bodies, technological water and wastewater.

Emissions testing. We determine the composition of the flue-gases and the concentration of solid particles.

Oil testing: We carry out testing of transformer, turbine and compressor oils as well as hydraulic and thermic oils.

Fuel testing: We offer testing of solid biofuels, liquid fuels and natural gas.

Asbestos testing: We determine fibre concentrations in the air and settled fibrous dust on surfaces as well as carry out testing of asbestos-containing materials.
