

In 1997, Latvenergo established the Energy Efficiency Center (currently - Energy Center) and started making a persistent effort to raise awareness about the efficient use and management of energy resources.

One of the sustainability signposts of Latvenergo is **energy efficiency**

We are convinced that everyone can reduce the energy bills of their family and protect our shared environmental resources through their actions and daily habits.

Elektrum Energy Center provides information on:

climate change and sustainability and energy independence

lighting, heating and ventilation solutions,

selection and efficient use of electrical appliances

innovative technologies to improve energy efficiency,

renewable energy production

electric vehicles and charging options.
